Summary

Software Engineer focused on TypeScript, Node.js, and React for web and mobile. Sole engineer on a production e-commerce platform with 70,000+ products and live payments: idempotent checkout, 3,130 automated tests, zero duplicate charges since launch, and 92 Lighthouse performance.

Experience

JWeb Dec 2025 – Present
Fullstack Developer *Remote*

- Owned the full delivery lifecycle of JWeb's web and mobile products as sole developer: technical decisions, database schema, APIs, testing, deployment, and maintenance.
- Shipped PCByte (pcbyte.pt), a production headless e-commerce platform (Next.js, MedusaJS/Node.js, PostgreSQL, Redis) serving real customers, with a 70,000+ product catalog and 92 Lighthouse performance.
- Built custom backend modules for payments, Odoo ERP sync, Meilisearch indexing, dual-bucket AWS S3 storage, and transactional email.
- Integrated PayPal and SIBS (card, Multibanco, MBWay) behind an idempotent checkout, with zero payment or duplicate-charge incidents since launch.
- Wrote 3,130 test cases (Vitest, Playwright) for checkout, auth, and payments; enforced CSRF protection, Redis rate limiting, and Zod validation across the API.
- Built the PCByte React Native app from the ground up, reusing only the backend API and implementing mobile-specific auth, cart, and checkout flows.
- Designed an APNs push service (Postgres + Drizzle token store, batched sender with dead-token cleanup, Redis rate limiting) and shipped the JWeb site as a native iOS app with Capacitor.
- Built multilingual (PT/EN/ES) sites (jweb.pt) on a headless CMS with structured data and hreflang, scoring 100 on Lighthouse performance.

Projects

Zipway – URL Shortener | *Go (Fiber), Next.js, PostgreSQL, Redis* github.com/esdrassantos06/zipway

- Go API with Clean Architecture, OpenAPI documentation, and a Docker Compose setup.
- Three-tier session cache (memory, Redis, PostgreSQL); redirects resolve from Redis before reaching Postgres.

Folga – Tax Copilot for Portuguese Freelancers | *Next.js 16, Drizzle ORM, PostgreSQL* folga.online

- Pure-TypeScript tax engine computing Social Security, IRS, and VAT set-asides per invoice, with 2026 tax parameters in a single source of truth.
- Money stored in cents, per-invoice tax snapshots for historical accuracy, an idempotent reminder cron, and Free/Pro billing through Polar.

Tarevity – Task Manager (open source) | *Next.js 16, Prisma, PostgreSQL, Redis* github.com/esdrassantos06/tarevity

- Secured with OAuth, Argon2, CSP nonces, CSRF protection, and role-based access; CI on GitHub Actions runs lint, Vitest, build, and CodeQL.

Technical Skills

Languages: TypeScript, JavaScript, SQL, Go, Python
Frontend: React, Next.js, Tailwind CSS, TanStack Query
Backend: Node.js, NestJS, REST APIs, OpenAPI, MedusaJS
Databases: PostgreSQL, Redis, MongoDB, Drizzle, Prisma
Testing: Vitest, Jest, Playwright, React Testing Library, Zod
Cloud & Tools: AWS (S3), Docker, GitHub Actions, Git
Mobile: React Native, Capacitor (iOS)
Spoken languages: Portuguese (native), English

Education

Tokio School | *Front-end Developer* May 2024 – Jan 2025
