Summary

Full Stack Developer building web and mobile products with TypeScript, Next.js, and Node.js. Ships production headless e-commerce with live payment integrations (PayPal, Multibanco, MBWay) and multilingual sites scoring 100 on Lighthouse. Owns features end to end, from Postgres schema and API to the iOS build.

Experience

JWeb Dec 2025 – Present
Fullstack Developer *Remote*

- Sole developer on JWeb's production web and mobile products, from first commit to deploy.
- Shipped PCByte (pcbyte.pt), a headless e-commerce platform live in production with real customers: Next.js storefront over a MedusaJS backend, cataloguing 70,000+ products with Google OAuth, Redis caching, idempotent checkout, and PayPal, card, Multibanco, and MBWay payments — holding 92 on Lighthouse performance at that catalog size.
- Covered checkout, auth, and payment flows with 3,130 test cases (Vitest, Playwright); enforced CSRF protection, Redis rate limiting, and Zod input validation across the API, with zero payment or duplicate-charge incidents since launch.
- Built PCByte's React Native app from the ground up, sharing only the MedusaJS API with the storefront and implementing mobile-specific auth, cart, and checkout flows.
- Built multilingual (PT/EN/ES) institutional sites (jweb.pt) on a Keystatic CMS with a Markdoc blog, Schema.org structured data, and hreflang, scoring 100 on Lighthouse performance.
- Engineered an APNs push platform (Postgres + Drizzle token store, batched sender with dead-token cleanup, admin broadcast console, Redis rate limiting) and shipped the JWeb site as a native iOS app with Capacitor, supporting universal links and App Tracking Transparency.
- Wired analytics through Google Tag Manager behind a GDPR-aware consent layer.

Projects

Folga – Tax Copilot for Portuguese Freelancers | *Next.js 16, Drizzle ORM, PostgreSQL* folga.online

- Built a pure-TypeScript tax engine that computes Social Security, IRS, and VAT set-asides per invoice, with 2026 tax parameters in a single source of truth and IRS brackets cross-verified against independent sources.
- Shipped a dashboard tracking billed revenue, withheld IRS, tax reserve, and a VAT exemption-threshold gauge, with fiscal deadlines and email reminders sent by an idempotent cron via Resend.
- Implemented Better Auth (email/password and Google), Zod validation, and Free/Pro billing through Polar as Merchant of Record; stored monetary values in cents and persisted each invoice's tax breakdown at issue time for historical accuracy.

Phantom Code – AI Coding Assistant | *Electron, React, NestJS, OpenAI API* phantomcode.pt

- Built a cross-platform desktop app that captures code from screenshots, extracts it with AI, and returns working solutions to programming problems.
- Architected an Electron + React client against a NestJS API, reaching 80–90% accuracy on code extraction from screen captures.

Technical Skills

Languages: TypeScript, JavaScript, Python, Go
Frontend: React, React Native, Next.js, Tailwind CSS, GSAP
Mobile: React Native, Capacitor (iOS), APNs Push Notifications
Backend: Node.js, NestJS, MedusaJS
Scripting & Data: Python, PostgreSQL, Redis, Drizzle, Prisma
Testing & Auth: Vitest, Jest, Playwright, Better Auth, Zod
Tools: Docker, AWS
